

TY(IT)
Artificial Neural Network
List of Experiments

1. Train a network with three different inputs and initial weight vector with Perceptron learning rule using python.
2. Train a network with three different inputs and initial weight vector with Hebbian learning rule using python.
3. Train a network with three different inputs and initial weight vector with Delta learning rule using python. Assume $\lambda = 1$ and $c=0.1$.
4. Realization of logical AND, OR function using Perceptron learning rule.
5. Classify handwritten digits using Tensor flow.
6. Design a model for speech recognition.
7. Design an expert system for prediction of Parkinson disease.
OR
Stock Market Price prediction using feed forward algorithm.
